

ABSTRACT

The subject of the invention is a polyolefin fiber for the reinforcement of products based on fibers and a hydraulic-setting substance, **characterized**
5 **in that** it includes a size carrying a function which assists the fiberizing operation, a function in which the fiber can be wetted by the composition of the hydraulic-setting substance, and a function of promoting adhesion to the hydraulic-setting substance.

The fiber is used as reinforcing fiber in a product based on fibers and a
10 hydraulic-setting substance.
